- [Homepage des Teams Galaxis](#)

The Student team "Galaxis", sponsored by the Chair of Computer Science 11, participates annually in the Carolo-Cup competition organized by TU Braunschweig for autonomic moving model cars.

Carolo Cup 2011

The aim of this competition is to allow students an intensive analysis of interdisciplinary problem statements dealing with electrical engineering, mechanical engineering and computer science at an early stage. Experiences in the practical implementation of student knowledge combined with team work, project and time management optimize their requirements for starting a professional career. On February 8th, 2011, the team of Aachen, Galaxis, achieved the 2nd place in this year's Carolo-Cup in Braunschweig. Therefore, the students were able to take home a trophy for the fourth time in a row, since the beginning of the competition. The team was only defeated by the Team "Spatzenhirn" from Jülich. The Team "S.A.D.I." from Zwickau achieved the third place. Even though the first place from last year could not be defended, the team, consisting of five members, of which four are new members, was very satisfied with their delivered performance. Our students (from left to right): Benedikt Rieke, Thomas Gatterdam, Bernhard Kirchen, Benjamin Hilgers and Matthias May
