

Pictures of the Model Car

Videos

A short clip showing the car park automatically:

- [Video 1](#) (wmv, 4MB, recorded on December, 12th 2006) The car detects the parking spot when driving past. The car will park automatically upon driver request. The required length of the parking spot is forced by the construction of the car merely allowing a limited movement of the front-wheels (about 45°).
